VOL. XIV. NO. 19.

GREENVILLE, KY., THURSDAY, JUNE 48, 1912.

50c. PER YEAR, IN ADVANCE

TESTING MILK WITHOUT USE OF SPECIAL INSTRUMENTS

Process Is Described for Detecting Added Water or of Skimmed Milk and Is More Accurate Than Simple Use of the Lacted-Ensimeter Without the Creamoineter Check.

Testing Milk Without Apparatus.

The following process for the detec- | delivery at the station much would be tion of added water or of skimmed accomplished toward the betterment wilk in ordinary milk is more accu-of the another of many origreasy hatter.

One cause of waxy origreasy hatter todensimeter without the creamome- is overchurning. One should stop the check. The whole test can be churn when the butter is in granular eggs. made in five minutes. The result form before it becomes a mass. tion consisted in the addition of wa- cows all to feed together at night, ter or in the subtraction of cream, but eight to know that some of them will as a rule this matters little to the con- get more than they require, while sumer. What he wants to know is others will not secure enough to keep whether or not he had what he paid them even in normal flesh.

The suspected milk is stirred with a milk is largely due to lack of perfect spoon, in order to disseminate into cleanliness with the milking mensils, the whole liquid the cream which may and personal cleanliness. have come to the surface. Then one volume of milk is poured into fifty volumes of water. (One fluid onnee to two and a half pints.) A candio is lighted in a dark room. The experimenter takes an ordinary drinking glass with a tolerably flat and even pay to "rough" a dry cow. It costs as bottom, and holds it right above the candle, at a distance of about one foot from it, so as to be able to sec the flame of the candle through the bottom of the glass. He then pours slowly and carefully the diluted milk CHEAPLY MADE into the glass.

The flame becomes less and less bright as the level of the liquid rises into the glass. The flame is soon reduced to a dult white spot. A little Convenient Receptacle May Be more liquid, slowly added so as to avoid pouring an execss, and the flame becomes absolutely invisible. All that remains to be done is to measure the height of the liquid in the glass, this being most conveniently Co., la., says that he is in favor of ascertained by dipping into it a strip picking seed corn while picking to of pastehoard and then measuring the crib and he thinks that a better quaiwet part. It should measure not over ity and sounder ear ean be pleked, ole lineh if the milk is pure. With says the liouaestead. He sends a good quality milk, diluted and tested as stated, the depth will be about 7-8 of an inch hefore the flame is lost to

A mixture of one volume of milk and a half a volume of water should show a depth of 11/2 inches. A depth of 2 inches indicates either partially skimmed mlik or a mixture of one volume of good milk with one of water, and so ca.

vlew.

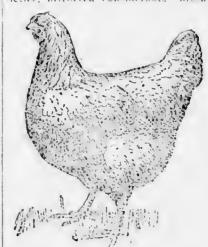

The reader has already understood that the process is based upon the crease the opacity of milk. The same the seed box for any ordinary size tion of the lactodensimeter in milk, instead of wiring it or nnilling to the is worthless, as a skimmed milk may have a normal density if eare has been taken to pour into it a certain amount of water. Density should be taken before and after skimming, and the percentage of cream should be determined with the creamometer. Thus applied, the density test requires a lactodensimeter, a thermometer, and a creamometer, and the test requires twenty-four hours, while the result is not much more accurate than

the opacity test just described. Much of the trouble with the milk is caused after it leaves the pro- wagon box. In order to get the measducers, often being held back at the mements for the iren hold the bex stations 36 to 48 hours before it is on the step of the wagon and measure shipped. This milk must necessarily the distance from the inside of the step. be nearly 60 hours old before it around the box to the top of wagon ceaches the consumer. If the board box allowing about three inches at of health would insist that all milk both ends for book and projection at should be shipped out on the day of pottom,

All fairminded people know history when we are dead, for their that when people are settled in close proximity, that a lot of chickens running at large are troublesome and aggravating and ought not to be allowed thus to roam. There seems to be about as much propriety and fairness in restricting chickens from running on the public throughfares as there is in restricting cows and hogs from the same. It was hoped that we had an up to date and progressive council and that they would

> There is another nuisance that should be looked after. We are of the opinion that the dog crop of the city is too abundant for our needs and demands. We think that the dog industry should be looked after by the proper authorities. It would be a progressive idea to retire the ization of a brass band, and has at dogs to the back yards for safe keeping. Notwithstanding it is truc that people and dogs have been associated together in friendly rehave trotted together down thro the back woods of time; but now man has been morally and intellecfugily clerated, while the dog retains his original condition and we think that the partling of ways between people and dogs is at hand and that a seperation, to some extent, would be advisable. Therefore a dog restriction from the public throughfares we think, is necessary for the peace and dignity of our town. There was a time, even in this country, when the dog seem-

strike for a higher and more defined

ed to be an absolute necessity and

more or less useful, when the possum and other wild animals were a pest, but now the raccoon age has passed and dog usefullness for sale. This is a desirable prois not so great. The dog crop of our town seems to be principally ore used by cruel sportsmen in un-Bob White, whose families are clustered in the fields and forests. We regard the partridge the most beautiful and innocent of the bird White's family until his race is fast becoming extinct, like the red men of the west. We have always admired Bob White, and never killed the fray when bystanders separated that was cheerful as he sat perched lieve that a world without birds millions of worms, insects, bugs, larva, in the land, on vegetation, in the air, borers in wood, etc., and that if all bird life was swept away, that in less that a mounth plagues worse than those of Egypt would destroy all human and animal life. I'cople who have emerged from beneath the shadows of the world's rudeness and have come into the sunshine of refinement and benevolent intelligence ought to use their influence in bringing about a bester state of affairs in our social and domestic procedure. There are

many other things now being pracin perfecting life and living. Now while there are some things that we do not need, there are others that de do, and the most important is, that we need a sewerage system for our town. We need two trunk line sewers running thro our city east and west of Main big branch that entpties into Caney creek, this is an importance that by Sept. 4. should be looked after. An oppo-be waged with the cry that we have go means to do the work, but if men ! one bonds to run their lustness it ooks like our tavn could do the same. While we live, let us live to enjoy the comforts of life, to breathe pure air and enjoy the fruits of our liberty. Let the people and the governing authorities of our town have business nerve to build up and improve it, make it wholesome and healthy; we shall live longer and feel better and shall increase the population and the business of our town; let everbody open their eyes shall not miss when we are covered up with mother earth. Our liberallties and philanthropy will guild our

works do follow them. LON TILEAGO.

KEEP THE LATELS HOLD BUSH

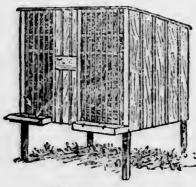

Fowls Need Exercise, and Activity and Proficiency Go Hand in Hand-Make Them Scrutch.

Every poultry writer in the latel has told his readers day in and day out that exercise is necessary for the well being and well doing of laying hens. There is good sense and round are con in this polyice. While all conk had no play makes Jack a full loy, no work and idleness makes a good look a non-producing loafer. Fowls need plenty of exercise. When given their ities of your remedies, although I liberty they will wander for miles over am 70 years old." the fields and hunt and dig for bugs and seeds and that is the time they lay the most eggs. The lazy hen is never the laying hen. Activity and proficiency go hand in hand. It is, however, a sore trial to the neutry keeper to keep his hens active in winter. The tendencies are entirely toward singgleliness upon the part of the fowls. Inactivity brings its own highest possible source of knowlpenalties. No animal organism can edge. If you have any of the maintain bealth and virility without exercise. Such is not in the line of creation's manifest intent. Neither man nor the lower animals can expect a healthy digestlon, normal liver or good general tone of the system without some lustling. The practled question arises, "What is the surest way to induce poultry to hunde and exercise?" We must not feed too Jestily er make it too easy for the birds to get their food. They will not work nuless obliged to, and in this particular are not unlike many linman beings that we know. We must make them seratch for their living. One of the main points of the Philo system is to hury the wheat or oats in the ground several inches deep and let the hens dig it up, either in a spronted condition or otherwise. We must make them scratch in a foot of straw or leaves for their grain all winter. Also throw some large sized beef seraps among the litter. They will hunt and dig all day long for such delicacles and get the much-needed exercise at the same time. And this parts the vigor and health that promote the egg production and vitality that gives us the greater amount of fertile eggs. Make them work for all that they get; only feed mash feed, table scraps and vegetables in the troughs; throw all the grain into a

GOOD COOP FOR FATTENING

Slats Far Enough Apart to Allow Chickens to Eat and Drink.

This fattening coop can be made any size desired. It has a slat front with the slats far enough apart to allow the chickens to eat and drink out of the little troughs, writes D. D. Lawson in the Farm and Fireside. The floor is also made of state, which makes the coop sanitary. The little

Fattening Coop

trongis are made with lids, thus proteeting the food and water from dirt and dust. The roof is sloping, to allow the water to run off of it in rainy weather. A box of gravel or oystershell should be kept in the coop. This is an excellent way to fatten chickens.

POULTRY NOTES

Do not neglect the laying hen's exer

The best partner on an egg farm is a good laying hen.

Finely bred birds are often badly bred egg producers. Judge not a hen by her beauty, but

by the way she does her duty. You can keep breeding drakes as long as seven or eight years. The largest ingredients in eggs are

lime, nitrogen and phosphoric acid. The goose, unlike the duck, does not scatter her eggs wherever she hap-
